

## **Placement Empowerment Program**

### ***Cloud Computing and DevOps Centre***

Set Up a Virtual Machine in the Cloud Create a freetier AWS account. Launch a virtual machine and SSH into it.

Name: Renita

Department: ECE

## Introduction

The objective of this Proof of Concept (POC) is to explore the process of setting up a virtual machine in the cloud using the AWS Free Tier. A virtual machine (VM) is a crucial component in cloud computing, enabling users to deploy and manage scalable computing resources without requiring physical hardware. This POC serves as a foundational exercise for understanding cloud infrastructure and using AWS EC2 to create a simple and cost-effective computing environment.

## Overview

This POC demonstrates the step-by-step process to:

1. Create a free AWS account.
2. Launch a virtual machine using AWS EC2.
3. Configure and secure the instance with a key pair and a security group.
4. Connect to the VM using SSH from a Windows system.

The project covers basic tasks that are essential for beginners in cloud computing, offering hands-on experience with AWS infrastructure.

# Objectives

- 1. Learn AWS EC2 Basics:** Understand how to create, configure, and launch an EC2 instance.
- 2. Practice Secure Connections:** Use SSH to securely connect to the instance.
- 3. Gain Practical Experience:** Explore the AWS Management Console to manage and interact with cloud resources.
- 4. Understand Free Tier Usage:** Work within the AWS Free Tier to avoid unnecessary costs.

# Importance

**1. Foundation for Cloud Computing:** Understanding how to launch and manage virtual machines is a fundamental skill for cloud practitioners.

**Skill Development:** This POC builds hands-on skills in AWS, including instance management, security configurations, and connecting via SSH.

**Scalability and Flexibility:** Demonstrates how cloud infrastructure allows for rapid deployment of resources compared to traditional setups.

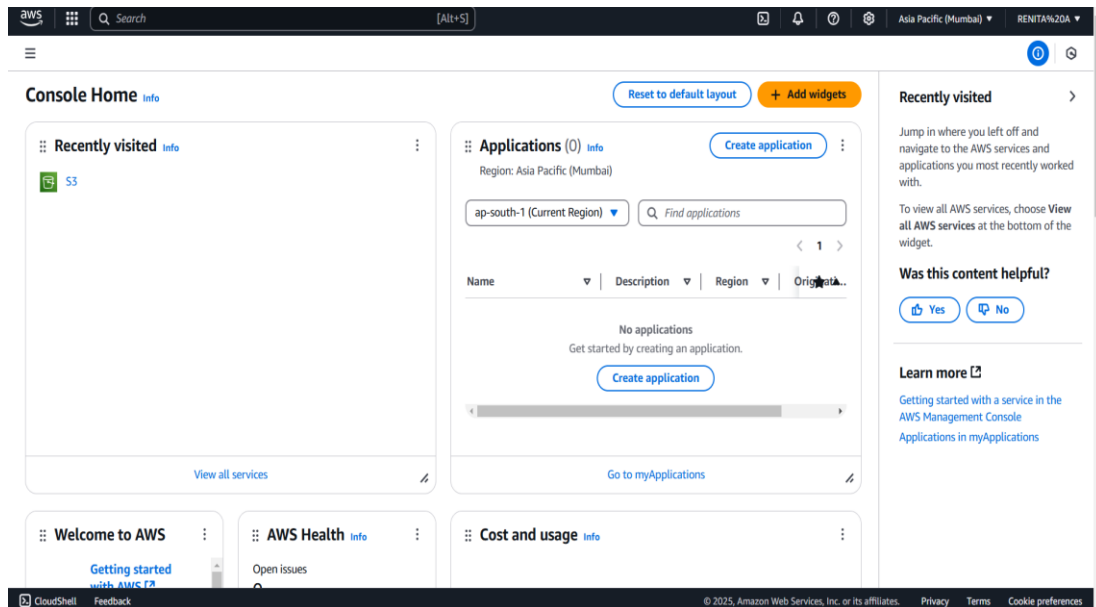

**Cost-Effective Learning:** Using AWS Free Tier enables users to explore cloud computing without financial investment.

**Career Relevance:** Knowledge of setting up virtual machines in AWS is highly valuable for careers in IT, cloud computing, and DevOps.

# Step-by-Step Overview Step

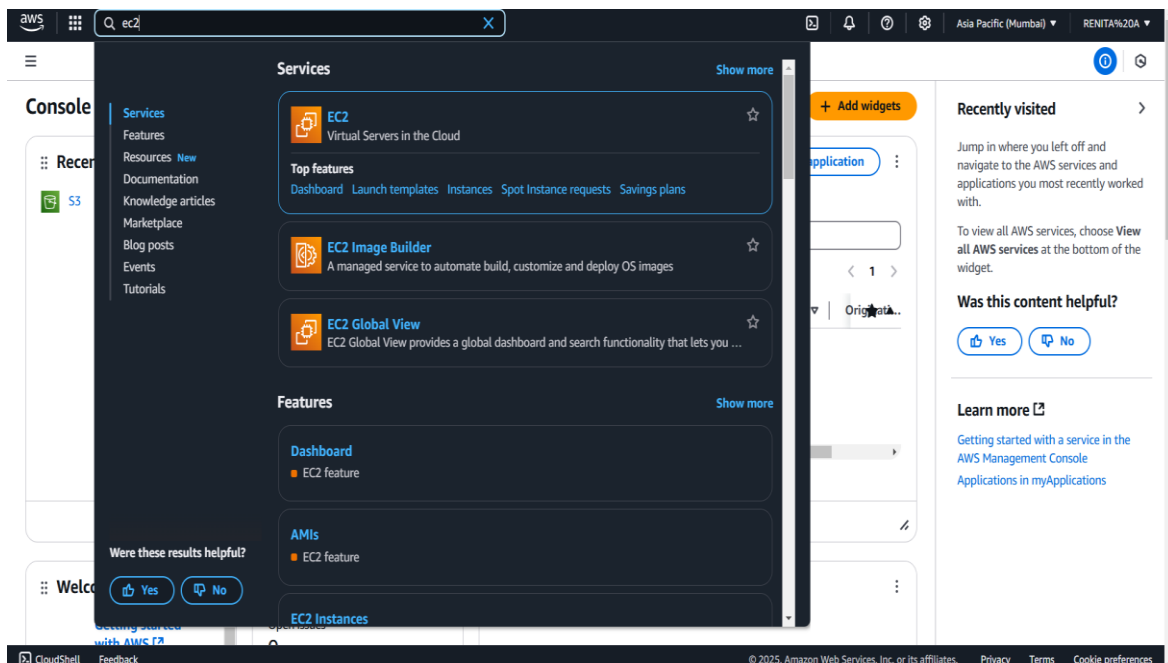

1:

1. Go to [AWS Management Console](#).
2. Enter your username and password to log in.

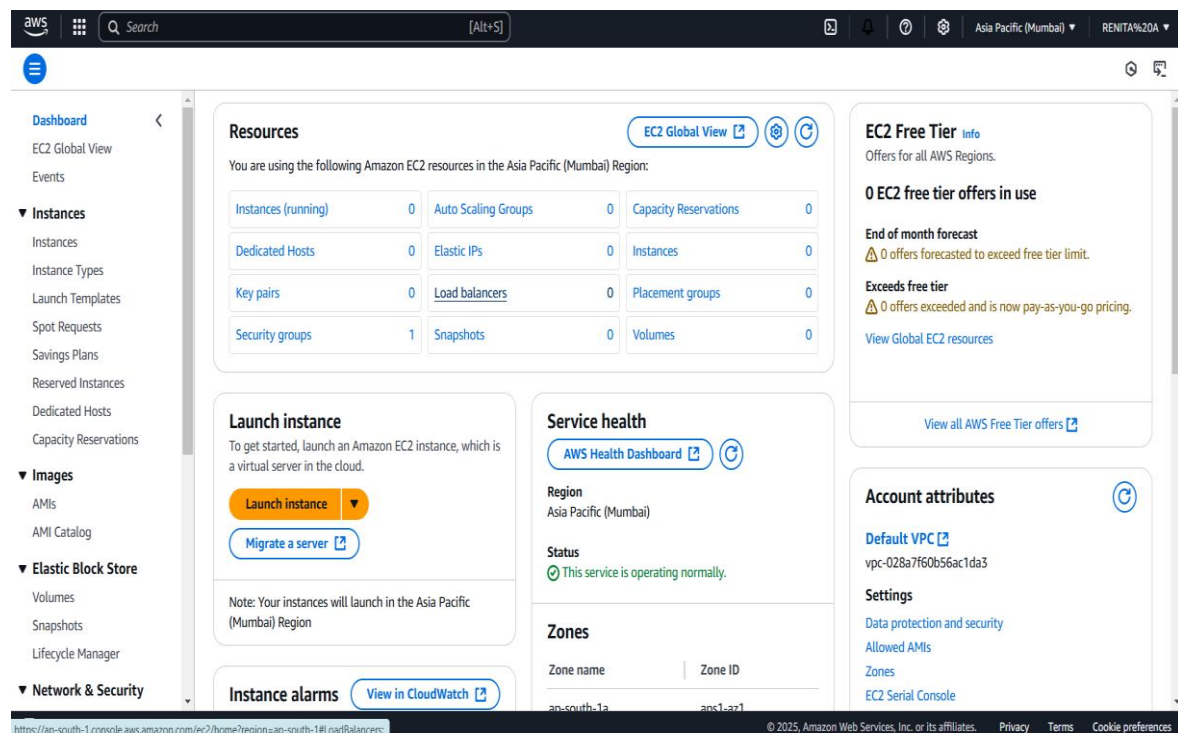

## Step 2:

Navigate to the AWS Management Console and search for **EC2**.

Step 3:

Click **Launch Instances**.

Step 4:

1. Choose **Amazon Linux 2023 Free Tier AMI** or **Ubuntu Free Tier AMI**.

2. Select the **t2.micro** instance type (free tier).

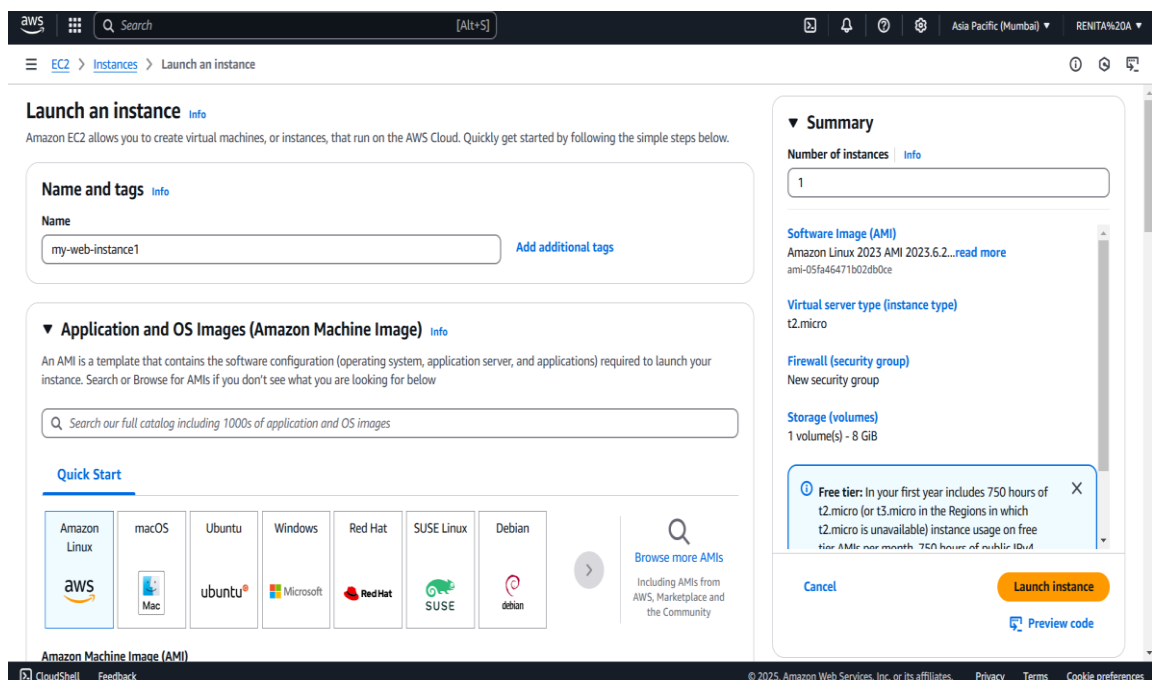

3. Configure security group:

Allow **SSH** (Port 22) from your IP.

4. Add a key pair:

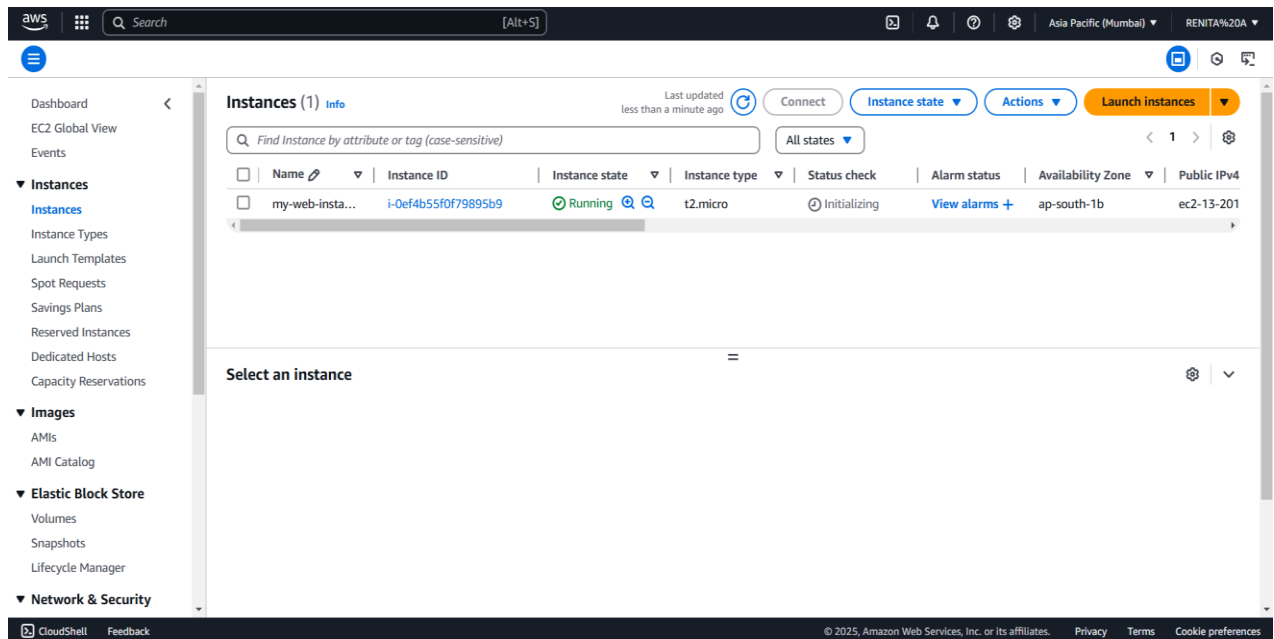

If you don't have one, create a new key pair and download it as a .pem file.

5. Click **Launch Instance**.

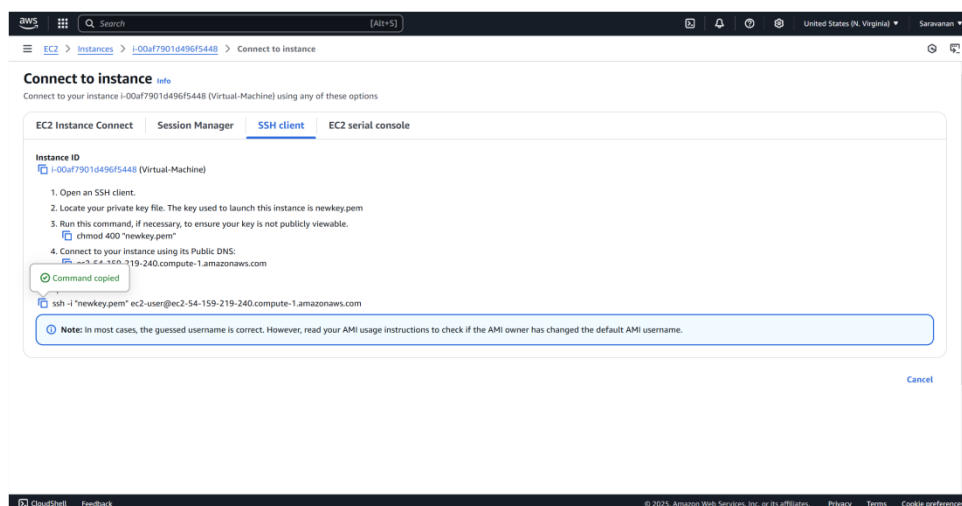

Step 5:

Check your running instance in the Instances section . Select your Instance and click the Connect Option.

## Step 6:

Go to the SSH client section, and copy the command provided under the 'Example' section.

## Step 7:

```
Windows PowerShell

```
[ec2-user@ip-172-31-4-215 ~]$
```

# Outcome

1. Create and configure a free AWS account to use cloud resources within the Free Tier.
2. Launch an EC2 instance with Amazon Linux or Ubuntu as the operating system.
3. Generate and manage a secure key pair for SSH access to your EC2 instance.
4. Configure a security group to allow SSH connections to your instance from your IP address.
5. Successfully connect to the EC2 instance via SSH using the public IP address.

6. Gain hands-on experience with AWS EC2 and foundational cloud computing concepts.
